DANGERS & THREATS

- Outcompetes native plants
- **HIGHLY FLAMMABLE** when dry
- Can cause rashes and difficulty breathing

IDENTIFICATION

- Spherical yellow to gold flowers without petals
- Dark green carrot like leaves with pungent stinging odor
- Dried plant has bronze leaves with rusty tan flowers
- Grows November to May
- Flowering starts in February
- Ranges from 2 in - 2 ft tall
- Flowers range in size from about .5 - 1 cm (pencil eraser)

TREATMENT

- Pull or dig plants to remove
- Discard flowering plants in an enclosed bag to prevent tiny seeds from spreading
- Gloves and facemask recommended
- Hire a certified applicator to treat established infestation with herbicide

Large infestations are extremely difficult to eliminate. Reporting and removing early is essential.

After the growing season the plant dries, fueling fires and suppressing native wildflower blooms.
